TELEGRAM SETUP GUIDE FOR IFA

Select GROUP PRIVACY.

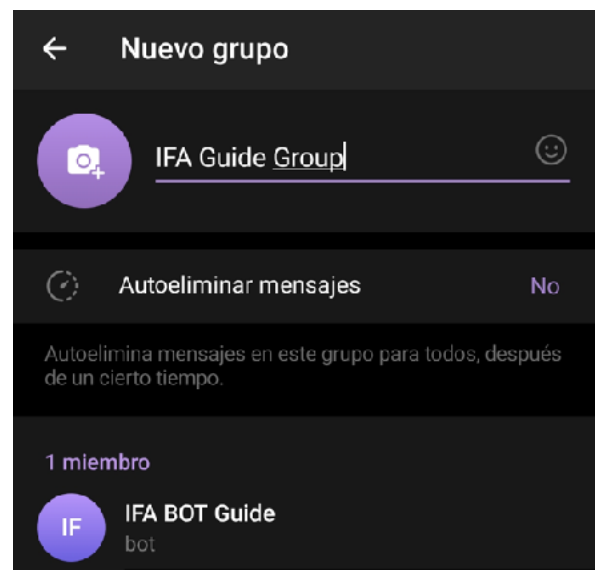

Select TURN OFF the privacy mode.

Now created the new Telegram group which will be used to receive IFA's notifications.

Add the IFA Bot to your telegram channel.

TELEGRAM SETUP GUIDE FOR IFA

While in IFA, click the hamburger icon to show the IFA menu. Under the Management section select the NOTIFICATIONS option. Create a new notification record and complete the empty fields under ACCOUNT INFO. Take note of the CODE number shown on the form.

The screenshot shows the HEMI BLADE IFA web interface. The left sidebar has a hamburger icon and a 'MANAGEMENT' tab. The main area is titled 'NOTIFICATIONS' and contains a search bar and a list of accounts. The 'ACCOUNTS' list includes 'ALARM EVENTS', 'TELEGRAM NOTIFICATION DEMO', 'AMARTE - ALARMS', 'DMP - ALARMS', 'EMAIL NOTIFICATION DEMO', and 'MDINA - ALARMS'. The 'ACCOUNT INFO' form is displayed with the following fields: TAG (IFA Guide), METHOD (Telegram), BOT (IFA Guide), CODE (1a1190), GROUP NAME, and REGION. A 'VERIFY' button is next to the CODE field. A 'SEND IMAGE' checkbox is at the bottom. An 'ENABLE' toggle switch is on the right.

Open your IFA Telegram group and sent the CODE shown on the form.

Go back to IFA and click on the VERIFY button to confirm the communication between IFA and Telegram it's been enabled and is operational.

The screenshot shows the same HEMI BLADE IFA web interface as before, but the 'VERIFY' button next to the CODE field is now highlighted with a red box. A tooltip message appears below the button, stating: 'You must send this code to the group where the BOT is member.'

If all went thru ok you will receive on your telegram channel a confirmation message like this one.
If so, you are all set.

Select the checkboxes of all events you want to be notified for in this notification record.
When done click the SAVE button to save it. Remember to test your notifications rules before putting them in production.
